Course Objectives/Course Outline
Spokane Community College

Course Title: Vascular Clinical Preparation

Prefix and Course Number: VASC 254

Course Description:

Students review all course materials in the first year with application on the clinical setting. Students develop skill at identification of both normal and abnormal images. Course is aligned with technical skills laboratory experience to allow students to develop clinical skills prior to assignment in a clinical setting.

Course Learning Outcomes:

By the end of this course, a student should be able to:

- Recall and apply clinical site policies and procedures.
- Perform calculations pertinent to all vascular technology exams.
- Identify and apply appropriate student behavior in the clinical setting.
- Perform vascular technology examinations under supervision.

Course Outline:

- I. Clinical site expectations
- II. Identification of normal and abnormal vascular technology images
- III. Review previous student journals for lessons learned
- IV. Develop vascular technology imaging skills in conjunction with technical skills lab
