Prefix and Course Number:	**GRDSN 142**
Course Title:	**Print Production**
Version Date: mm/dd/yyyy	**10/21/2019**

Course Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Identify the various types of printing processes.

2. Prepare, analyze and troubleshoot files for print production.

3. Construct digital layout and graphic files for print using current industry standards.

4. Use vector & raster art accordingly in a print production work flow.

5. Discuss the various models of digital color and color management, and apply them to digital images for print production.

6. Prioritize sending files to a print provider with all necessary components and instructions.

7. Plan and communicate with print production vendors and others in the graphic arts environment in order to produce the best results for printed material.
